Make Your Crypto Transactions Easier

A cryptocurrency is a digital or virtual currency that is secured by cryptography, which makes it nearly impossible to counterfeit or double-spend. Many cryptocurrencies are decentralized networks based on blockchain technology a distributed ledger enforced by a disparate network of computers. A defining feature of cryptocurrencies is that they are generally not issued by any central authority, rendering them theoretically immune to government interference or manipulation.

What is Forex ?

Forex is one of the most enormous and liquid markets around the globe. In 2010, the forex market accounted for more than 3 trillion dollars of daily trading. Over the last decade, a 40% increase in the daily volume of forex trade with 6.6 trillion Dollars each day is seen. This marks a nine-year peak since 2010. But the surprising fact is that the market did not exist a century ago. Unlike the stock market, we cannot trace the roots of the forex market.
